RIDER Publications

AUTOMATIC RECORD CHANGERS AND RECORDERS

8,000,000 record changers provide an important source of profit and this book gives all the technical data you need. Index of radio-combinations and their record changers assist in identification.

744 PAGES $7.50

VACUUM-TUBE VOLTMETERS

By the proper use of these instruments dynamic measurements can be made under all conditions. This book describes the theory and how these instruments help in finding electronic equipment troubles.

180 PAGES $2.50

FREQUENCY MODULATION

Prepare now for the post-war activity in this field. Transmission and reception of frequency-modulated signals are fully described, as well as descriptions of the f-m receivers now available. An investment that will pay dividends.

136 PAGES $2.00

SERVICING RECEIVERS BY MEANS OF RESISTANCE MEASUREMENT

How an ohmmeter is used in trouble shooting; how the location of defective resistors, transformers, chokes, etc. can be simplified.

203 PAGES $2.00

SERVICING BY SIGNAL TRACING

A universal system of trouble shooting fully described. It applies to all types of radio receivers, PA systems, television, etc. Signal tracing is the fundamental method of finding defects as it uses the signal itself.

360 PAGES $4.00
SPANISH EDITION $4.00

THE OSCILLATOR AT WORK

A basic description of the types of electron-tube oscillators you should know. This information will protect the investment you have made in your equipment and will guide you in selecting your future instruments.

256 PAGES $2.50

SERVICING SUPERHETERODYNES

Thousands of servicemen have found this book invaluable. The majority of the receivers coming into your shop are superhets and you must know the theory as well as the practical aspects that are covered in this book.

308 PAGES $2.00

AUTOMATIC FREQUENCY CONTROL SYSTEMS

You will find descriptions of AFC circuits from the simplest to the most complicated pushpull control circuit in this book. All types of discriminator circuits and operations of the various types of control circuits are described.

144 PAGES $1.75

THE CATHODE-RAY TUBE AT WORK

A complete description of how the cathode-ray tube functions and how the oscilloscope can be used in testing all types of receivers, transmitters, amplifiers, etc. Unretouched oscillograms show what you should see on the oscilloscope screen.

338 PAGES $4.00

THE METER AT WORK

A practical book for all who use meters. A full explanation of the principles on which each type of electric meter is based and how they function. The latter portion of the book describes the application and care of these instruments.

152 PAGES $2.00

ALIGNING PHILCO RECEIVERS

Everything you need to know for the aligning of these sets: i-f peaks, adjustment frequencies, trimmer and padder locations, etc. Prepared with the cooperation of the manufacturer's engineering staff. The tabular form of presentation saves time.

VOL. I 1929 to 1936 .... $2.00
VOL. II 1937 to 1941 .... $2.00

AN HOUR A DAY WITH RIDER SERIES

Alternating Currents in Radio Receivers.
D.C. Voltage Distribution
Resonance and Alignment
Automatic Volume Control

Each Book 96 Pages
Net Price $1.25 each

RIDER BOOKS ARE THE STANDARD OF THE RADIO SERVICING INDUSTRY

FOREWORD

Volume XIV is a continuation of the "Perpetual Trouble Shooter's Manual" series. In addition to this volume, Volumes I, II, III, IV, V, VI, VII, VIII, IX, X, XI, XII, and XIII have been published.

Inasmuch as owners of preceding volumes are familiar with the Manual and the nature of its contents, an elaborate description is not required. However, it might be said that the information presented in Volume XIV is condensed as much as possible in accordance with the requests of owners of previous volumes of this publication, but not at a sacrifice of any material. The attempt to condense the contents is based purely upon an effort to include the maximum amount of servicing data.

In a number of instances references are made to "conventional alignment." This term is used in conjunction with simple receivers which do not require elaborate alignment instructions. Such conventional alignment was described in the "How It Works" section of Volume VIII Index, and we feel that so many men are familiar with simple alignment operations that it would be a waste of space to include such alignment in conjunction with many of the receivers contained in Volume XIV.

It will be noted that this index covers Volume XIV only. This departure from our regular policy of combining the indexes of preceding volumes is because of the scarcity of paper due to the existing war-time restrictions. It is our intention to combine the Volume XIV index with the accumulative index of Volumes XI to XIII inclusive some time in the future when these restrictions on paper have been lifted.

As an accumulative index at the present is impossible, numerous references to other volumes of the Manual appear in this index. These were deemed necessary for the sake of clarity because the model numbers could not be inserted in their proper places, as they would be ordinarily.

Some record-changer and recorder data appear in Volume XIV, which supplement the service data on these devices published in Rider's "Automatic Record Changers and Recorders." This was done because it was felt that most of the owners of this book would desire all the latest data to bring their references up to date.

MAKE SERVICING EASY

RIDER MANUALS

The greatest collection of servicing data ever assembled. No serviceman can anticipate the year, make and model of the next set that will come to his bench. For this reason you **must** have the volume of Rider Manuals that contains the servicing information on that particular set. Benefit from the **complete** servicing information that only Rider Manuals can give you: Data on alignment, I-F peaks, operating voltages, parts lists and parts values, voltage ratings of condensers, wattage ratings of resistors, coil resistance data, gain data, and all the other information that is vital for speedy and accurate trouble-shooting.

VOL. XIV. This newest Rider Manual contains servicing data on the receivers that were among the last produced in April, 1942. Every effort was made in the compilation of the data in this volume to bring them up to date for all manufacturers. This addition of Rider's Volume XIV makes available to the radio servicing industry more than 19,000 pages of authentic servicing information.
1,376 pages, Net Price $12.50

VOL. XIII. Contains servicing data on receivers manufactured during the latter part of 1941 and early 1942. Cumulative index for Volumes XI, XII, and XIII. ...**1,672 pages, Net Price $12.50**

VOL. XII. Covers receivers manufactured up to April 1941 .....**Clarified schematics give breakdowns of complicated r-f and a-f switching circuits.** .....**1,648 pages, Net Price $12.50**

VOL. XI. Covers receivers manufactured up to June 1940. Includes vest pocket manual containing push-button frequency ranges of all automatically tuned receivers and other handy servicing data.
1,652 pages, Net Price $12.50

VOL. X. Complete information on receivers manufactured up to August, 1939. Includes a separate 188-page index covering Volume X and all preceding volumes. .....**1,664 pages, Net Price $12.50**

VOL. IX. Contains installation and servicing instructions on 1889 models manufactured up to October, 1938.
1,672 pages, Net Price $12.50

VOL. VIII. Receivers manufactured up to October, 1937 will be found in this volume. Contains installation and servicing instructions on many types of intercommunication systems.
1,650 pages, Net Price $12.50

VOL. VII. In this volume will be found sets manufactured up to October, 1936, together with data on older receivers hitherto unavailable.
1,600 pages, Net Price $12.50

VOL. VI. In this volume will be found sets manufactured up to November, 1935. Data on more than 950 models.
1,240 pages, Net Price $9.50

VOL. IV. Receivers manufactured up to March, 1934, will be found in this volume. Herein will be found the more complicated superhets with QAVC, noise gates, duo-diode pentodes, automatic tone controls, etc. .....**1,060 pages, Net Price $8.25**

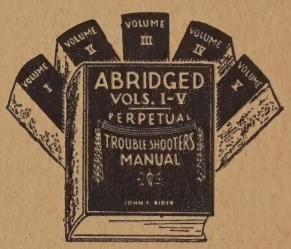
ABRIDGED MANUAL

Volumes I-V



The servicing information you need to service the old receivers will be found in the Abridged Manual, Volumes I-V. It is a compilation of the most widely distributed receivers released after 1929 that formerly appeared in Volumes I-V.

In order to select the proper receivers for inclusion in the Abridged Manual, all the manufacturers who were responsible for the sale of the greatest number of sets between 1930 and 1935 were contacted and information was obtained as to the most widely distributed receivers. The Abridged Manual was then compiled.

2,000 pages . . . Net Price $15.00

RIDER'S MANUALS HAVE more schematics . . . more I.F. peaks . . . more alignment data . . . . more circuit descriptions. . . . MORE EVERYTHING THAN ANY OTHER MANUALS.

A.C. CALCULATION CHARTS

146 charts 7" x 11" printed in two colors, covering all alternating current calculations from 10 cycles to 1000 megacycles. A tremendous time saver for all engineers and others who work on power, audio, supersonic, high frequency and ultra high frequency problems. Eliminates the slide rule.

160 PAGES . . . . . 9½ x 12 INCHES . . . . . CLOTH BINDING $7.50
